

# FUTURA BOULEVARD SALT TOLERANT MIX

- Quick establishment
- Rich green colour
- Salt tolerant

### APPLICATION RATE

150 kg/hectare, 60 lbs/acre  
0.5-1 kg/100m<sup>2</sup>, 2.5-3 lbs/1,000ft<sup>2</sup>

### GERMINATION

7-21 days

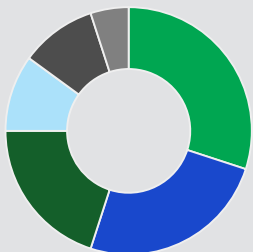

### DESCRIPTION

Soils can become contaminated with sodium chloride and calcium chloride along roadsides, sidewalks, and in coastal areas. Most turf grasses are very sensitive to higher levels of salt which results in weak plants, or complete desiccation. This usually creates an unsightly collection of various broadleaf weeds which have a greater tolerance to salt. FUTURA BOULEVARD is a mixture of turf grasses which have the highest natural tolerance to salty soils. With proper soil management and annual overseeding, an attractive, dense turf is possible and can be managed the same as any roadside turf mixture.

FUTURA BOULEVARD is not an aggressive sod former so following recommended seeding rate is required to achieve the desired plant population.

### MIX COMPONENTS

<b>30%</b>	Certified Creeping Red Fescue
<b>25%</b>	Certified Hard Fescue
<b>20%</b>	Certified Perennial Ryegrass
<b>10%</b>	Certified Alkali Grass
<b>10%</b>	Certified Creeping Red Fescue
<b>5%</b>	Certified Colonial Bentgrass
