

# ULTRA SHADE ALL PURPOSE LAWN MIX

- For areas with restricted sunlight
- Produces a fescue dominant stand
- Dense, fine, leaf texture

**APPLICATION RATE**

1.8 kg/100m<sup>2</sup>, 4 lbs/1,000ft<sup>2</sup>

**GERMINATION**

7-21 days

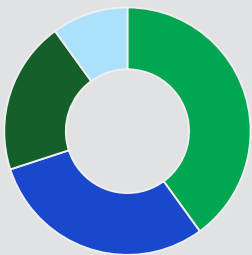

**DESCRIPTION**

Ultra Shade will produce a dominant fescue turf. This will consist of fine, bristle-like leaves that can become very dense. Mow at a higher cutting height for best results. Use in areas with restricted sunlight (50% - 70% Reduced Sunlight).

Compounding the problem of good turf in shade are factors including: dry soils, restricted air movement, periods of grass smothering while leaves are lying on grass, and fertility requirements that are lower than for other turf (Nitrogen at 1.5 kg/100m<sup>2</sup>).

**MIX COMPONENTS**

<b>40%</b>	Certified Creeping Red Fescue
<b>30%</b>	Certified Chewings Fescue
<b>20%</b>	Certified Perennial Ryegrass
<b>10%</b>	Certified Kentucky Bluegrass
