

KEY FEATURES

- High Endophyte level
- Excellent summer performer
- Dark green colour

Application Rate: 7-10 lbs/1000ft²

MIGHTY

PERENNIAL RYEGRASS

DESCRIPTION

- Superior stress tolerance and germination vigour
- Fast seedling germination and strong establishment
- Dark green colour with fine leaf texture
- Spreading growth habit for improved recovery in permanent cool season zones
- High tillering for excellent wear tolerance in all seasons
- Excellent performance even on poor soils
- High resistance to Gray Leaf Spot, Crown Rust, Red Thread and Brown Patch

USAGE

- Excellent for use on sports fields, home lawns, golf fairways and tees and in winter for dormant warm-season grasses
- Can be blended with other ryegrasses or included in mixtures with bluegrasses or fescues

MAINTENANCE

- Under normal conditions, you can see germination after 5-7 days after planting
- Adapted to all mowing heights
- Good seed to soil contact and adequate moisture are required for successful germination and establishment

TECHNICAL PRODUCT SPECIFICATIONS

Year of introduction	2007
Main uses	Sport fields, lawncare & golf
Seed count	250,000-275,000 seeds/lb.
Normal days to germinate	5-7 days
Normal days to first mowing	Approx. 21 days
NTEP quality ratings (2007 data)	Excellent
Genetic colour	Dark green
Seedling vigour	Very Good
Summer turf density	Dense
Salt tolerance (10,000 ppm)	Very good
Overseeding success	Excellent
Gray Leaf Spot resistance	Good
Brown Patch resistance	Excellent
Pythium resistance	Good
